Unit 2: Getting Started with Tableau

Due Date: 11:59 pm EST Sunday of Unit 2
Points: 100

Overview:

This assignment will provide hands-on experience with Tableau's basic operations.

Instructions:

1. Download *World Bank Indicators.xlsx* (publicly available World Bank data).
2. Open it in Tableau.
3. Clean the data. NOTE: Attach the *Review the Results* report to your submission.
4. Join the tables by country.
5. On the first sheet, create a side-by-side comparison using bar charts.
    - For "Rows", use "Region".
    - On the "Columns" shelf, choose 1 economic indicator and 1 health-related indicator as a comparison. You will need to create calculated SUM fields to include all the countries in that region. One of the Region values is "Null". Don't worry about dealing with that for now.
6. Create a 2nd sheet.
    - Once again, on the "rows" shelf, place the "Region" field.
    - Choose the same economic indicator as you did on the first sheet, but choose a different comparison field. You will need to create another calculated field. You can choose any fields you want - make sure you can support your reasoning.
7. Export the two sheets to PowerPoint.
8. Use the slideshow format to present your findings on the two sheets and explain their meaning.
    - Remember that correlation never equals causality, so wording should be "could indicate" or "may mean," etc.
    - At least one slide should address the "Null" value in "Regions" and why it limits your data.

Requirements:

- Include the *Review the Results* report from the data cleaning.
- Create a voice-over PowerPoint with a title slide, reference slide(s), and at least 8 body slides.
- Reference at least two authoritative sources using APA to substantiate your claims.

Be sure to read the criteria below by which your work will be evaluated before you write and again after you write.

Evaluation Rubric for the Getting Started with Tableau Assignment

CRITERIA	Exemplary	Proficient	Needs Improvement	Deficient
	20 points	**16 – 19 points**	**12 – 15 points**	**0 – 11 points**
Data Preparation	Data is thoroughly cleaned and prepared; all unnecessary columns are removed, and relationships are correctly established.	Data has been suitably prepared, most columns appropriately handled, and key relationships set up.	There are some issues in data preparation; additional cleaning is needed, and some relationships are missing.	Data preparation is inadequate; raw data is used unfiltered; relationships are not utilized.
Analysis and limitations	Calculated fields are created correctly to enable effective data analysis, and limitations of the data are noted and addressed thoroughly.	Calculated fields enable data analysis, with only minor issues and limitations of data mentioned but not thoroughly addressed.	Calculated fields have errors that impact analysis, and limitations of data are noted but not addressed.	Calculated fields are inadequate to support analysis goals and data limitations are not mentioned.
Explanations	Explanations and analysis demonstrate a deep understanding of data and insightful interpretation of trends.	Explanations and analysis demonstrate a deep understanding of data and insightful interpretation of trends.	Explanations of insights lack detail or clarity.	Explanations do not match visualizations or are unclear.
Presentation	The presentation covers all requirements effectively; explanations of insights are clear, concise, and impactful.	The presentation covers requirements; explanations could be clearer or more concise.	The presentation misses some requirements.	The presentation misses significant requirements.
